Overview

The application developed is for General Practionar who wants to manage the information for their patients online and want to make their patients to be able to access a number of thinks online e.g. the clinic timing, resources and information about their services.

The application itself is a web application, which is developed using:

> - PHP
> - MySQL
> - HTML
> - CSS
> - JavaScript

PHP is the main programming language and is used to connect to the database and create different classes used in the application. All the server side login is also written in the PHP language. The login, logout and all the other user related operations with database are done using PHP. MySQL is the backend database which is used to store all the data that application writes. MySQL contains the database and several tables that application uses to store user related data and also the data that is displayed to the user when they visit the website. HTML is the markup language used write the markup that is rendered inside a browser when a request hits server it processes the request and produces a HTML response and sends back to the browser. CSS is what is responsible for how the content will look and aligned inside a web page, all background colours, positions of the elements in a page defined in CSS. JavaScript is used to perform the client side operations e.g. the form validation. JQuery is a JavaScript library which provides a simplified way to control the client side operations.

The screen shots of the application pages are shown below;
